Part 4: Qualitative Disclosures Regarding Capital Structure and Capital Adequacy

Qualitative Analysis

A. Capital Structure

In general, the capital component is dominated by permanent capital. The core capital is the largest element of the Bank's capital. In December 2023, the total capital ratio position against ATMR was at 29.90% (consolidated). This ratio stands far above the minimum CAR requirement set by the Financial Services Authority. The Bank will also continue to strive to maintain CAR at a healthy level.

The Bank's consolidated capital structure is dominated by the core capital (89.0% of Bank BTPN's total consolidated capital). This capital consists of paid-up capital, additional paid-in capital and retained earnings. Bank's total capital as of 31 December 2023 is IDR 41.2 trillion, increased compared to end of last year, mainly due to increment in Core Capital (Tier 1) Component from profit.

The Bank continues to conduct assessment to strengthen the level of capital according to needs if market conditions are conducive.

The sources of capital that are expected to be pursued by the Bank to realize the capital plan or meet the Bank's capital needs are from Retained Earnings and additional capital from shareholders, either through a right issue or a public offering. The accumulation of Retained Earnings is affected by the amount of dividends paid by the Bank to shareholders which is decided in the General Meeting of Shareholders. In determining dividend payments, the Bank always considers capital adequacy, both in terms of fulfillment of CAR and fulfillment of Legal Lending Limit (LLL) in accordance with plans for future credit growth. Bank capital is projected to increase in line with accumulated profits.

B. Capital Adequacy

The management uses the capital ratio standards to monitor capital adequacy in accordance with the industry standards. OJK's approach to capital measurement is mainly based on the monitoring of the level of required capital against available capital and the Bank continuously apply the Internal Capital Adequacy Assessment Process (ICAAP) in accordance with prevailing regulations. This is related to establishing capital adequacy in accordance with the Bank's risk profile.

This relates to determining capital adequacy in accordance with the provisions of the Bank's risk profile. This process is carried out to increase the Bank's effectiveness in implementing risk management.

The Bank uses the standardized approach in capital management of credit risk. The calculation of the Risk-Weighted Asset (RWA) is generally performed by referring to the risk weight in accordance with OJK regulations and the rating published by rating agencies designated by regulator.

The Bank calculates capital adequacy for operational risk using the Standard Approach (SA) method. Based on this method, the Bank allocates minimum capital for operational risk by multiplying the Business Indicator Components (KIB) with the Internal Loss Multiplier Factor (FPKI).

In calculating RWA for Market Risk, the Bank uses standard methods in accordance with OJK regulation regarding the calculation of RWA for Market Risk. The Bank's management has a good understanding of managing its capital and views the capital planning as an important element to establishing the Bank's strategic objectives.

The Bank carries out an analysis of the Bank's capital adequacy for now and in the future through a strategic planning process. This is demonstrated by maintaining the performance of the Bank and its parent company through continuous monitoring of the quality of risk management, regular audits by the Internal Audit Work Unit, adequate policies regarding dividend distribution, as well as management commitment to the Bank's strategies and targets as outlined in the Bank's Business Plan.

The Bank's capital ratio is rated as very good, namely above the requirements set forth by the Financial Services Authority. The capital growth trend based on the Bank Business Plan also shows its capability to support the Bank's future business expansion.

Likewise, if associated with the incentive for the Statutory Reserve Requirements (GWM) for Macroprudential Intermediation Ratio (RIM). The Bank's Capital Adequacy Ratio (CAR) level meets the minimum OJK requirement of 8.0%-14.0%.
